Hey,

I am Octavian, a senior graphic designer with product experience, focused on simple, clean and elegant solutions with an obsession for anything visual.

Curiosity drives my work, and lately that curiosity has been focused on AI and the new ways it can augment creativity and graphic design.

Generative asset system / brand asset generator (using Claude in VS Code)

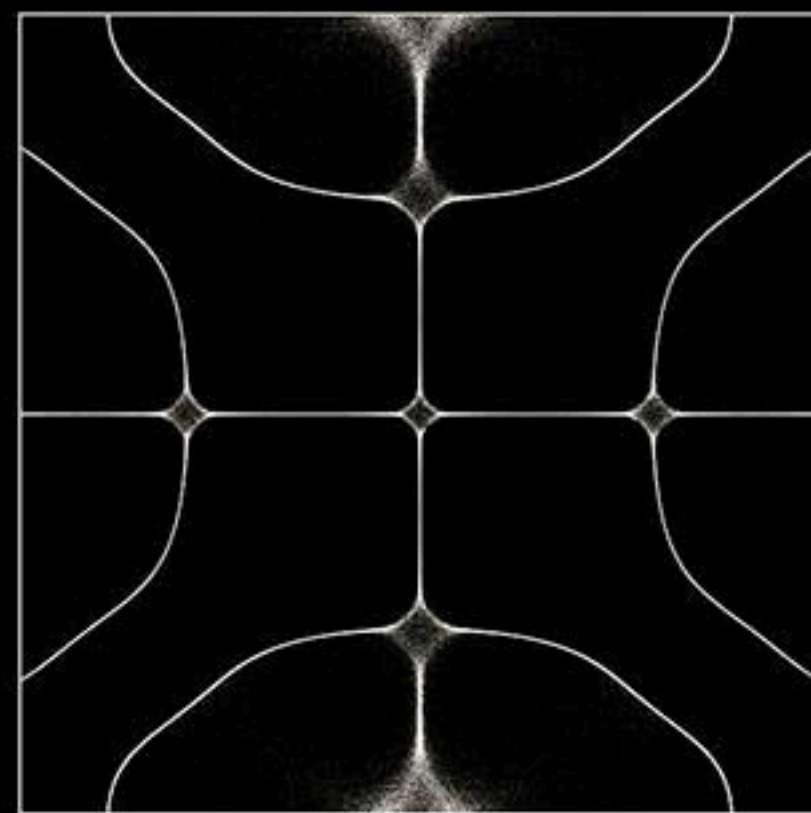

I have created a generator for hero art + Open Graph images using three.js, a javascript library for 3d. Consistent at scale. Reduces and democratizes asset production time, in the spirit of open source software.

It's packed with features and very customizable. If you just want a quick image, hit "randomize all" and you get an image. Instructions and shortcuts are also built into the generator.
